## New SoundStik Turns Up the Volume for ADA

Vista Group International's new SoundStik **with Volume Control** is designed to make exhibit audio **more accessible** for people with hearing and vision impairments.

Visitors adjust the sound by pressing UP or Down **tactile pushbuttons**. When they replace the SoundStik in its Hanger Mount, the **volume automatically resets to a mid-range level**.

An **auto-mute feature** keeps the SoundStik quiet when hanging up even if the audio continues to play—ideal for video kiosks with looping programs.

**Integrated NC or NO circuitry** enables optional control of start and stop functions for message repeaters and other devices.

Made of flame retardant, high-impact ABS plastic, the new SoundStik is also ROHS compliant.

Vista Group's popular family of SoundStik products has been serving the museum community, here and abroad, for over 25 years. Clients include museums, libraries, historical societies, halls of fame, nature centers, tradeshows and corporations.

Vista Group also manufactures outdoor SoundPost systems for gardens, parks and overlooks and provides equipment and services for tour guides and self-guided audio tours.
