VC-X
Amplifier for Audio Description

Vista Group's *VC-X with earphone detect option* is a compact, easy way to offer audio description with volume control and reset it automatically for the next user.

Feed the audio description soundtrack to the VC-X Audio In jack. Connect the volume control push buttons to screw terminals Common/Up/Down. Connect your remote user earphone jack to the earphone jack on the VC-X end panel. Set Dip Switch #1 on the back panel to the up position.

Volume reset is triggered when the visitor inserts a mono or stereo 3.5mm headphone plug into the jack.

Pre-wired power supply included.

Other modes reset volume when a visitor presses a program start switch or when the program(s) finish playing.

Vista Group's family of audio products has been serving the museum community, here and abroad, for over 25 years. Clients include museums, libraries, historical societies, halls of fame, nature centers, tradeshows and corporations.
