

HOW TO:

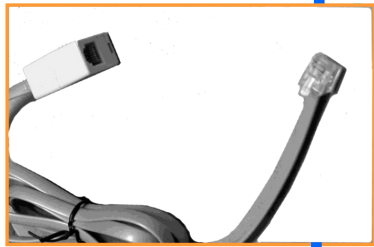

Plug and Play the SoundStik-amp

1

SOUNDSTIKamp tethers have 10 inch leads that terminate with a modular plug.

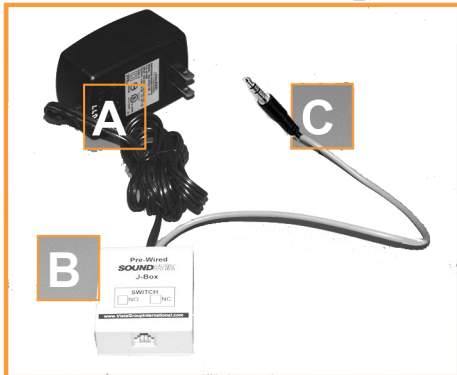

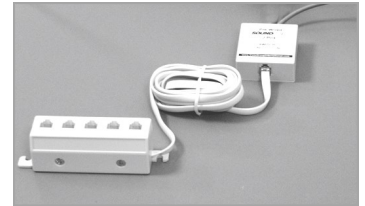

(Two conductors are for power, two for audio and two for optional client device control. For other configurations, please call.)

2

A length of modular wiring gets you over to the power supply.

Vista Group supplies different lengths of wiring and various couplers for single or multiple SoundStik applications.

3

The power supply is prewired to a junction box with your choice of audio hookup cable installed. Two terminals are available for optional client device control.

- A: Power Supply
- B: Junction Box
- C: Audio Cable: specify RCA, 3.5mm, or tinned wires

Plug the parts together and that's it.

Play
