# HOW TO:

Plug and Play SoundStik-mp3 Wiring

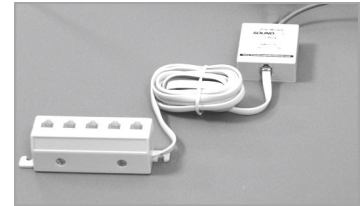

1 SoundStik tethers terminate with a modular plug. (Other terminations are available upon request.)

2 The plug clicks into a coupler with modular wiring to reach the power source location.

Vista Group supplies different lengths of wiring and various couplers for single or multiple SoundStik applications.

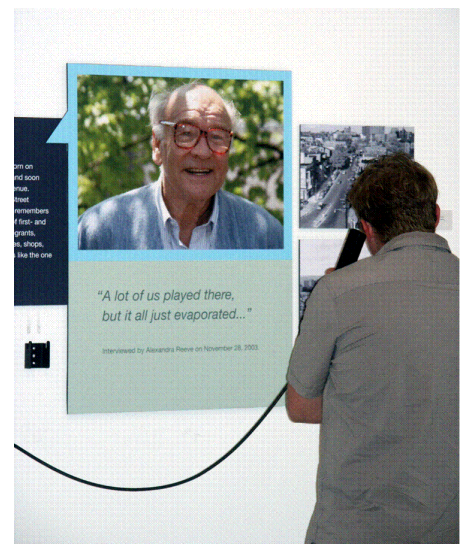

3 This in turn clicks into the pre-wired junction box at the power supply.

Done.
